DETAILED ACTION

Claim Rejections - 35 USC § 102

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Gilliland et al.

With regard to claims 1 and 8, Gilliland et al (US 5,966,487) disclose a converter having a parallelepiped housing for enclosing a gigabit interface converter (GBIC) including a printed circuit board , a laser source, a light detector, and

a connector wherein one end of each of the laser source and the light detector (col. 10, lines 55-67) is coupled to a first end of the printed circuit board (col. 10, lines 3-5) and the connector (114) is formed at a second end opposite to the first end of the printed circuit board, the housing comprising:

a base (100) having a first spacer, a first space, a second space and a third space, wherein the first space has a first stopper (117) and a second stopper (123) for positioning the printed circuit board and for being fitted against the connector therebetween, the second space is adapted for positioning the laser source, the third space is adapted for positioning the light detector, the first spacer is adapted for separating the second and the third spaces, and the first spacer having a first fastener (a central projection between 154 and 156 being extended in a direction opposite to 148) for fastening the printed circuit board; and a cover (100') having a first protrusion and a second protrusion (protrusions of 124'; 124') for being fitted against the connector of the GBIC.

With regard to claims 2 and 9, Gilliland et al disclose that the base further comprises a second spacer (the end enlarged portion of 148) for separating the second and the third spaces.

With regard to claims 3, 4, 10, 11, Gilliland et al disclose that each of the junction units is a screw hole (121, 121').

With regard to claim 5, Gilliland et al disclose that the printed circuit board has at least one threaded hole (col. 9, lines 34-36) each disposed corresponding to one of the junction units.

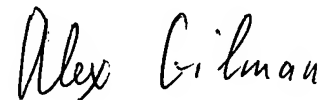

Art Unit: 2833

With regard to claims 6, 7, 12, 13, Gilliland et al disclose that the base further has a first fastening wall (113) and a second fastening wall (115) and .the cover further comprises a second fastener (113') and a third fastener (115'), (col. 8, lines 22-50)
